

Shaft Collars

Single Split and Double Split Type

Chaines-Plus Single Split and Double Split Shaft Collars are offered in sizes ranging from 1/8" to 3 15/16". Single Split Shaft Collars wrap around the shaft providing an equal dispersion of holding forces. This results in a tighter fit and greater clamping power preventing damage to the shaft often caused by over tightening standard set screw collars. Single split collars are also easier to adjust and move.

Double Split Shaft Collars are easy to disassemble minimizing labor and downtime. Double split collars have better holding capability and are more adaptable to shaft sizes that deviate from nominal size.

Single Split

Double Split
